

Quick Fact Sheet

A comprehensive program using proven methods to achieve superior results in joint replacement.

FOR SURGEONS

Surgeon-authored Patient Guide

Co-branded with SwiftPath, tailored to surgeon specific protocols

JointCamp presentation training and materials

Patient education class fully integrated with the surgeon guide to prepare patients and caregivers for the entire episode of care

Landing page on SwiftPath.com

Contains surgeon's welcome video, contact and DME information, pre and post-op surveys, FAQs, surgical checklist

Pathway Selection Algorithm®

A proprietary online tool that incorporates shared decision making and accurately identifies patients appropriate for outpatient joint replacement^{1,2}

Home monitoring and patient reported outcomes

Ability to monitor recovery and get data on patient outcomes

Surgeon RoundTables

Cadaver labs, MIS and joint injection training and techniques, sharing best practices

Support in transitioning to shorter stays or outpatient

Consultation in implementing the program elements that result in better joint replacement episodes of care and happier patients

Access to educational tools

SwiftPath TV, videos, online tools

Surgeon promotion by SwiftPath

Link from surgeon locator engine on swiftPath.com, newsletters, press releases, email and social media campaigns

Surgeon micro-site

Website co-branded with surgeon's practice and SwiftPath

Telehealth solutions

Improved access for patients for consults, post-op and follow-ups via telecommunications

Patient community education fair package

Co-branded event materials to promote your practice

FOR PATIENTS

Outpatient or shorter stays

Potential lower cost, rapid rehab, and more recovery at home

Surgeon-authored Patient Guide

A comprehensive guide authored by your surgeon, a beginning to end surgical roadmap

JointCamp

Class to learn about the process (presurgical, surgical and post) that fully prepares patients and caregivers for joint replacement

Minimally invasive surgery

Less pain, less blood loss, less narcotics, smaller scar, faster recovery and better outcomes

Long-acting joint injection

Minimizes or eliminates pain for the first 48-72 hours post surgery, reducing the need for narcotics

Modern Pain Management

An evidence based protocol to control pain after surgery and minimize the need for narcotics

Online reporting & home monitoring

Post surgery access to surgical team with online reporting

Access to educational tools

SwiftPath TV, videos, tutorials, presurgical instructions, DME purchases and surgeon specific information
